Support Priority Levels

Priority 1 (P1) – A catastrophic production problem within the Drupal Commerce software that severely impacts the Partner’s production systems, or because of which Partner’s production systems are down or not functioning, or that results in a loss of production data and no workaround exists. Commerce Guys will use continuous efforts per agreed-upon SLA, with appropriate escalation to Senior Management, to provide a resolution for any P1 problem as soon as is commercially reasonable.

Priority 2 (P2) – A problem within the Drupal Commerce software where the Partner’s system is functioning but in a reduced capacity, or the problem is causing significant impact to portions of the Partner’s business operations and productivity, or the software is exposed to potential loss or interruption of service. Commerce Guys will use reasonable efforts per agreed upon SLA to provide a resolution for any P2 problem as soon as is commercially reasonable.

Priority 3 (P3) – A medium-to-low-impact problem within the Drupal Commerce software that involves partial and/or non-critical loss of functionality, or that impairs some operations but allows the Partner’s operations to continue to function. Problems for which there is limited or no loss of functionality or impact to the Partner’s operation and for which is there is an easy workaround qualify as P3. Commerce Guys will use reasonable efforts per agreed upon SLA to provide a resolution for any P3 problem in time for the next minor release of the software.
